

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996).

There are a number of reasons why the world's population is growing so fast. One of the main reasons is that the world's population is becoming younger. In 1990, the world's population was 5.3 billion. By 2000, it was 6.1 billion. By 2010, it is expected to be 6.9 billion. By 2020, it is expected to be 7.6 billion. By 2030, it is expected to be 8.3 billion. By 2040, it is expected to be 8.9 billion. By 2050, it is expected to be 9.6 billion. By 2060, it is expected to be 10.3 billion. By 2070, it is expected to be 10.9 billion. By 2080, it is expected to be 11.5 billion. By 2090, it is expected to be 12.1 billion. By 2100, it is expected to be 12.7 billion.

Another reason why the world's population is growing so fast is that the world's population is becoming more urban. In 1990, 40% of the world's population lived in urban areas. By 2000, 48% of the world's population lived in urban areas. By 2010, 55% of the world's population lived in urban areas. By 2020, 62% of the world's population lived in urban areas. By 2030, 69% of the world's population lived in urban areas. By 2040, 76% of the world's population lived in urban areas. By 2050, 83% of the world's population lived in urban areas. By 2060, 89% of the world's population lived in urban areas. By 2070, 95% of the world's population lived in urban areas. By 2080, 98% of the world's population lived in urban areas. By 2090, 100% of the world's population lived in urban areas. By 2100, 100% of the world's population lived in urban areas.

A third reason why the world's population is growing so fast is that the world's population is becoming more educated. In 1990, 50% of the world's population was illiterate. By 2000, 40% of the world's population was illiterate. By 2010, 30% of the world's population was illiterate. By 2020, 20% of the world's population was illiterate. By 2030, 10% of the world's population was illiterate. By 2040, 5% of the world's population was illiterate. By 2050, 2% of the world's population was illiterate. By 2060, 1% of the world's population was illiterate. By 2070, 0.5% of the world's population was illiterate. By 2080, 0.2% of the world's population was illiterate. By 2090, 0.1% of the world's population was illiterate. By 2100, 0.05% of the world's population was illiterate.

A fourth reason why the world's population is growing so fast is that the world's population is becoming more healthy. In 1990, the world's population had a life expectancy of 52 years. By 2000, the world's population had a life expectancy of 57 years. By 2010, the world's population had a life expectancy of 62 years. By 2020, the world's population had a life expectancy of 67 years. By 2030, the world's population had a life expectancy of 72 years. By 2040, the world's population had a life expectancy of 77 years. By 2050, the world's population had a life expectancy of 82 years. By 2060, the world's population had a life expectancy of 87 years. By 2070, the world's population had a life expectancy of 92 years. By 2080, the world's population had a life expectancy of 97 years. By 2090, the world's population had a life expectancy of 102 years. By 2100, the world's population had a life expectancy of 107 years.

A fifth reason why the world's population is growing so fast is that the world's population is becoming more wealthy. In 1990, the world's population had a GDP of \$1.5 trillion. By 2000, the world's population had a GDP of \$2.5 trillion. By 2010, the world's population had a GDP of \$4.5 trillion. By 2020, the world's population had a GDP of \$7.5 trillion. By 2030, the world's population had a GDP of \$11.5 trillion. By 2040, the world's population had a GDP of \$15.5 trillion. By 2050, the world's population had a GDP of \$19.5 trillion. By 2060, the world's population had a GDP of \$23.5 trillion. By 2070, the world's population had a GDP of \$27.5 trillion. By 2080, the world's population had a GDP of \$31.5 trillion. By 2090, the world's population had a GDP of \$35.5 trillion. By 2100, the world's population had a GDP of \$39.5 trillion.

A sixth reason why the world's population is growing so fast is that the world's population is becoming more mobile. In 1990, 10% of the world's population was mobile. By 2000, 20% of the world's population was mobile. By 2010, 30% of the world's population was mobile. By 2020, 40% of the world's population was mobile. By 2030, 50% of the world's population was mobile. By 2040, 60% of the world's population was mobile. By 2050, 70% of the world's population was mobile. By 2060, 80% of the world's population was mobile. By 2070, 90% of the world's population was mobile. By 2080, 95% of the world's population was mobile. By 2090, 98% of the world's population was mobile. By 2100, 100% of the world's population was mobile.

A seventh reason why the world's population is growing so fast is that the world's population is becoming more diverse. In 1990, 10% of the world's population was diverse. By 2000, 20% of the world's population was diverse. By 2010, 30% of the world's population was diverse. By 2020, 40% of the world's population was diverse. By 2030, 50% of the world's population was diverse. By 2040, 60% of the world's population was diverse. By 2050, 70% of the world's population was diverse. By 2060, 80% of the world's population was diverse. By 2070, 90% of the world's population was diverse. By 2080, 95% of the world's population was diverse. By 2090, 98% of the world's population was diverse. By 2100, 100% of the world's population was diverse.

A eighth reason why the world's population is growing so fast is that the world's population is becoming more powerful. In 1990, 10% of the world's population was powerful. By 2000, 20% of the world's population was powerful. By 2010, 30% of the world's population was powerful. By 2020, 40% of the world's population was powerful. By 2030, 50% of the world's population was powerful. By 2040, 60% of the world's population was powerful. By 2050, 70% of the world's population was powerful. By 2060, 80% of the world's population was powerful. By 2070, 90% of the world's population was powerful. By 2080, 95% of the world's population was powerful. By 2090, 98% of the world's population was powerful. By 2100, 100% of the world's population was powerful.
